BarberBoost — Email System: Test Cases & Final Testing Report

Date: 7 May 2026
Branch tested: development (commit 3fd2e2f)
Tester: Claude Code (automated) + Dan Jatau
Email provider: Resend v6.10.0
Runtime: Node.js v22.14.0 / Next.js 16.2.2

1. Executive Summary

A thorough automated test suite was written and executed against the BarberBoost email system. The suite covers all **8 email templates**, **7 structural checks per template**, **template-specific content assertions**, **edge-case rendering**, and **live delivery via the Resend API**.

Metric	Result
Total checks run	145
Passed	145
Failed	0
Live emails delivered	8 / 8
Bugs found	1 (XSS — fixed)
Outstanding issues	1 (local dev env config — non-blocking)

The email system is **ready for production** on the development branch. One security bug was found and fixed during testing. All 8 email types delivered successfully to webxceld@gmail.com via Resend.

2. Scope

2.1 In Scope

#	Area	Description
1	Email templates	All 8 templates in src/lib/email/templates.ts
2	Template structure	DOCTYPE, branding, HTML tag balance, plain-text fallback
3	Template content	Subject lines, key copy, CTAs, recipient-specific data
4	Edge cases	Null optional fields, singular/plural copy, null ownerName
5	Security	HTML injection / XSS in user-supplied fields
6	Live delivery	Actual send to webxcelld@gmail.com via Resend API
7	Branch comparison	main (production) vs development (local) diff

2.2 Out of Scope

Area	Reason
Cron reminders (/api/cron/reminders)	Requires live Vercel environment + Supabase data
Stripe webhook billing emails	Requires live Stripe webhook events
End-to-end booking → email flow	Requires live Supabase database + auth session
Email client rendering (Gmail, Apple Mail, Outlook)	Manual visual inspection required
WhatsApp reminders (Twilio)	Separate system, not part of email scope

3. Test Environment

3.1 Software

Component	Version
Node.js	v22.14.0
Next.js	16.2.2
Resend SDK	^6.10.0
TypeScript	(via Node --experimental-strip-types)

3.2 Credentials Used

Variable	Source	Value
RESEND_API_KEY	.env.example	re_aqsSKwyH... (key truncated)
RESEND_FROM_EMAIL	.env.example	noreply@barberboost.app
TEST_EMAIL	Default	webxcelld@gmail.com

3.3 How to Re-run

```
node --experimental-strip-types scripts/test-emails.mjs
```

Structure checks only (no live sends):

```
SKIP_SEND=1 node --experimental-strip-types scripts/test-emails.mjs
```

Send to a different address:

TEST_EMAIL=your@email.com node --experimental-strip-types scripts/test-emails.mjs

4. Branch Comparison: main vs development

Before testing, a full diff was performed between the main (production) branch and the development branch.

Key finding: main contains only 3 commits (the initial monolithic build). development is **31 commits ahead** and contains all live functionality. The main branch would fail in production for the following reasons:

Issue in main	Status in development
Resend instantiated at module level → Vercel build crash	Fixed: dynamic import('resend') inside handlers
FROM address using wrong domain (barberboost.com)	Fixed: barberboost.app everywhere
RESEND_FROM_EMAIL validated as strict email, rejects "Name <email>" format	Fixed: relaxed to min(1)
bookingRef field missing from BookingEmailData → template throws	Fixed: added to interface and all callers
No plain-text fallback on any template	Fixed: text field added to all 8 templates
staffInvitation() template missing entirely	Added
newSignupAlert() template missing entirely	Added
auth/callback sent welcome email only, no signup alert	Fixed: now sends both
Env validation throws in production on partial config	Fixed: logs warning, does not crash

5. Test Cases

Legend

- **TC-ID** — unique test case identifier
- **Type** — structural (render output), content (copy/data), edge (boundary input), live (actual Resend send)
- **Result** — PASS / FAIL

TC-BCF — Booking Confirmation

Triggered when a client completes a booking via the dashboard (POST /api/bookings) or public booking page (POST /api/public/bookings).

TC-ID	Type	Test Case	Expected	Result
BCF-01	structural	subject field is a non-empty string	Present	PASS
BCF-02	structural	html field is > 100 chars	≥ 4914 chars	PASS
BCF-03	structural	text fallback field is > 20 chars	≥ 507 chars	PASS
BCF-04	structural	HTML contains	Present	PASS

TC-ID	Type	Test Case	Expected	Result
		<!DOCTYPE html> declaration		
BCF-05	structural	HTML contains BARBERBOOST branding	Present	PASS
BCF-06	structural	HTML uses brand gold colour #c9a84c	Present	PASS
BCF-07	structural	<div> tags are balanced (open = close)	4 pairs	PASS
BCF-08	structural	<td> tags are balanced (open = close)	20 pairs	PASS
BCF-09	content	Subject includes booking reference BB- F47AC10B	Present	PASS
BCF-10	content	Subject includes shop name	Present	PASS
BCF-11	content	HTML greets client by name (James Wright)	Present	PASS
BCF-12	content	HTML shows prominent booking reference block	Present	PASS
BCF-13	content	HTML displays the BB- XXXXXXXXX reference code	Present	PASS
BCF-14	content	HTML displays service name	Present	PASS
BCF-15	content	HTML displays barber name	Present	PASS
BCF-16	content	HTML displays formatted date	Present	PASS
BCF-17	content	HTML displays formatted price (£35.00)	Present	PASS
BCF-18	content	HTML shows deposit paid row when deposit provided	Present	PASS
BCF-19	content	HTML displays shop address when provided	Present	PASS
BCF-20	content	HTML links shop phone as tel: link	Present	PASS
BCF-21	content	Plain text includes booking reference	Present	PASS
BCF-22	content	Plain text includes all key fields (name, service, barber, date)	All 4 present	PASS
BCF-23	live	Email delivered via Resend API	Resend ID: f837eac6	PASS

Subject line format: Booking Confirmed [BB-F47AC10B] — Crown Cuts Barbershop · Wednesday, 7 May 2026

TC-BRM — Booking Reminder

Triggered by the Vercel Cron job (GET /api/cron/reminders) ~24 hours before a confirmed appointment. Planned.

TC-ID	Type	Test Case	Expected	Result
BRM-01	structural	subject field is a non-empty string	Present	PASS
BRM-02	structural	html field is > 100 chars	≥ 3575 chars	PASS
BRM-03	structural	text fallback field present	≥ 429 chars	PASS
BRM-04	structural	HTML contains <!DOCTYPE html>	Present	PASS
BRM-05	structural	HTML contains BARBERBOOST branding	Present	PASS
BRM-06	structural	HTML uses brand gold colour	Present	PASS
BRM-07	structural	<div> tags balanced	3 pairs	PASS
BRM-08	structural	<td> tags balanced	14 pairs	PASS
BRM-09	content	Subject contains word “tomorrow”	Present	PASS
BRM-10	content	Subject includes shop name	Present	PASS
BRM-11	content	HTML greets client by name	Present	PASS
BRM-12	content	HTML heading says “See You Tomorrow”	Present	PASS
BRM-13	content	HTML displays service name	Present	PASS
BRM-14	content	HTML displays shop address/location row	Present	PASS
BRM-15	content	Plain text contains APPOINTMENT REMINDER header	Present	PASS
BRM-16	live	Email delivered via Resend API	Resend ID: db89d3ba	PASS

Subject line format: Reminder: Your appointment tomorrow at 2:30 PM — Crown Cuts Barbershop

TC-BCN — Booking Cancellation

Triggered when a booking’s status is patched to cancelled (PATCH /api/bookings).

TC-ID	Type	Test Case	Expected	Result
BCN-01	structural	subject field is a non-	Present	PASS

TC-ID	Type	Test Case	Expected	Result
		empty string		
BCN-02	structural	html field is > 100 chars	≥ 3158 chars	PASS
BCN-03	structural	text fallback field present	≥ 362 chars	PASS
BCN-04	structural	HTML contains <!DOCTYPE html>	Present	PASS
BCN-05	structural	HTML contains BARBERBOOST branding	Present	PASS
BCN-06	structural	HTML uses brand gold colour	Present	PASS
BCN-07	structural	<div> tags balanced	3 pairs	PASS
BCN-08	structural	<td> tags balanced	10 pairs	PASS
BCN-09	content	Subject says “Cancelled”	Present	PASS
BCN-10	content	HTML detail table includes booking reference row	Present	PASS
BCN-11	content	HTML displays BB-XXXXXXX reference	Present	PASS
BCN-12	content	HTML includes “BOOK AGAIN” CTA button	Present	PASS
BCN-13	content	CTA button URL uses shop booking page slug	crown-cuts present	PASS
BCN-14	content	Plain text contains BOOKING CANCELLED header	Present	PASS
BCN-15	content	Plain text includes booking reference	Present	PASS
BCN-16	live	Email delivered via Resend API	Resend ID: 2077c6ee	PASS

Subject line format: Booking Cancelled — Crown Cuts Barbershop

TC-NSF — No-Show Follow-up

Template ready for triggering after a no-show event. Not yet wired to an automated trigger — available for manual or future cron use.

TC-ID	Type	Test Case	Expected	Result
NSF-01	structural	subject field is a non-empty string	Present	PASS
NSF-02	structural	html field is > 100 chars	≥ 2548 chars	PASS
NSF-03	structural	text fallback field present	≥ 389 chars	PASS
NSF-04	structural	HTML contains	Present	PASS

TC-ID	Type	Test Case	Expected	Result
		<!DOCTYPE html>		
NSF-05	structural	HTML contains BARBERBOOST branding	Present	PASS
NSF-06	structural	HTML uses brand gold colour	Present	PASS
NSF-07	structural	<div> tags balanced	3 pairs	PASS
NSF-08	structural	<td> tags balanced	4 pairs	PASS
NSF-09	content	Subject contains "miss" (we missed you)	Present	PASS
NSF-10	content	HTML heading says "We Missed You"	Present	PASS
NSF-11	content	HTML mentions the booked service	Present	PASS
NSF-12	content	HTML includes "REBOOK NOW" CTA button	Present	PASS
NSF-13	content	Plain text contains WE MISSED YOU header	Present	PASS
NSF-14	live	Email delivered via Resend API	Resend ID: 5859403b	PASS

Subject line format: We missed you — Rebook at Crown Cuts Barbershop

TC-LSA — Low Stock Alert

Triggered when an inventory item transitions to low/out-of-stock state via POST or PATCH /api/inventory.

TC-ID	Type	Test Case	Expected	Result
LSA-01	structural	subject field is a non-empty string	Present	PASS
LSA-02	structural	html field is > 100 chars	≥ 5597 chars	PASS
LSA-03	structural	text fallback field present	≥ 334 chars	PASS
LSA-04	structural	HTML contains <!DOCTYPE html>	Present	PASS
LSA-05	structural	HTML contains BARBERBOOST branding	Present	PASS
LSA-06	structural	HTML uses brand gold colour	Present	PASS
LSA-07	structural	<div> tags balanced	3 pairs	PASS
LSA-08	structural	<td> tags balanced	13 pairs	PASS
LSA-09	content	Subject includes correct item count ("3 items")	Present	PASS
LSA-10	content	Subject includes shop	Present	PASS

TC-ID	Type	Test Case	Expected	Result
		name		
LSA-11	content	Subject does NOT start with emoji 🗑	Confirmed clean	PASS
LSA-12	content	HTML shows red "OUT OF STOCK" badge for qty=0	Present	PASS
LSA-13	content	HTML shows amber "LOW STOCK" badge for qty>0	Present	PASS
LSA-14	content	HTML lists all 3 items (Fade Spray, Beard Oil, Pomade)	All 3 present	PASS
LSA-15	content	HTML includes "VIEW INVENTORY" CTA button	Present	PASS
LSA-16	content	Plain text lists all 3 items	All 3 present	PASS
LSA-17	content	Plain text includes "OUT OF STOCK" status text	Present	PASS
LSA-18	edge	Subject uses singular "item" when only 1 item	Singular confirmed	PASS
LSA-19	live	Email delivered via Resend API	Resend ID: 886f032f	PASS

Subject line format: Low stock alert — 3 items need restocking at Crown Cuts Barbershop

TC-WEL — Welcome Email

Triggered on first-ever email confirmation in GET /auth/callback. Sends once only (guarded by welcome_sent user metadata flag).

TC-ID	Type	Test Case	Expected	Result
WEL-01	structural	subject field is a non-empty string	Present	PASS
WEL-02	structural	html field is > 100 chars	≥ 3964 chars	PASS
WEL-03	structural	text fallback field present	≥ 431 chars	PASS
WEL-04	structural	HTML contains <!DOCTYPE html>	Present	PASS
WEL-05	structural	HTML contains BARBERBOOST branding	Present	PASS
WEL-06	structural	HTML uses brand gold colour	Present	PASS
WEL-07	structural	<div> tags balanced	3 pairs	PASS
WEL-08	structural	<td> tags balanced	7 pairs	PASS

TC-ID	Type	Test Case	Expected	Result
WEL-09	content	Subject contains word "Welcome"	Present	PASS
WEL-10	content	Subject does NOT contain any emoji character	Confirmed clean	PASS
WEL-11	content	HTML greets shop owner by name	Present	PASS
WEL-12	content	HTML contains all 3 numbered setup steps (①②③)	All 3 present	PASS
WEL-13	content	HTML includes the shop's public booking page URL	Present	PASS
WEL-14	content	HTML includes "OPEN MY DASHBOARD" CTA button	Present	PASS
WEL-15	content	HTML links to support@barberboost.app	Present	PASS
WEL-16	content	Plain text includes all 3 numbered steps (1. 2. 3.)	All 3 present	PASS
WEL-17	live	Email delivered via Resend API	Resend ID: b0c242b1	PASS

Subject line format: Welcome to BarberBoost — let's get you set up

TC-STF — Staff Invitation

Triggered when a new staff member with an email address is added via POST /api/staff.

TC-ID	Type	Test Case	Expected	Result
STF-01	structural	subject field is a non-empty string	Present	PASS
STF-02	structural	html field is > 100 chars	≥ 2857 chars	PASS
STF-03	structural	text fallback field present	≥ 331 chars	PASS
STF-04	structural	HTML contains <!DOCTYPE html>	Present	PASS
STF-05	structural	HTML contains BARBERBOOST branding	Present	PASS
STF-06	structural	HTML uses brand gold colour	Present	PASS
STF-07	structural	<div> tags balanced	1 pair	PASS
STF-08	structural	<td> tags balanced	8 pairs	PASS
STF-09	content	Subject contains shop name	Present	PASS

TC-ID	Type	Test Case	Expected	Result
STF-10	content	HTML heading says "You've been added to [Shop]"	Present	PASS
STF-11	content	HTML shows shop name in detail row	Present	PASS
STF-12	content	HTML shows staff member's name in detail row	Present	PASS
STF-13	content	HTML references the owner's name (added by X)	Present	PASS
STF-14	content	HTML includes "View BarberBoost" CTA button	Present	PASS
STF-15	content	Plain text has shop name in UPPERCASE	Present	PASS
STF-16	edge	ownerName: null — HTML contains no literal "null"	Confirmed	PASS
STF-17	live	Email delivered via Resend API	Resend ID: e185ba44	PASS

Subject line format: You've been added to Crown Cuts Barbershop on BarberBoost

TC-NSA — New Signup Alert (Internal)

Triggered alongside the welcome email in GET /auth/callback, and independently via POST /api/signup-notify. Sent to the internal NOTIFY_EMAIL address.

TC-ID	Type	Test Case	Expected	Result
NSA-01	structural	subject field is a non-empty string	Present	PASS
NSA-02	structural	html field is > 100 chars	≥ 2869 chars	PASS
NSA-03	structural	text fallback field present	≥ 211 chars	PASS
NSA-04	structural	HTML contains <!DOCTYPE html>	Present	PASS
NSA-05	structural	HTML contains BARBERBOOST branding	Present	PASS
NSA-06	structural	HTML uses brand gold colour	Present	PASS
NSA-07	structural	<div> tags balanced	1 pair	PASS
NSA-08	structural	<td> tags balanced	12 pairs	PASS
NSA-09	content	Subject includes owner name	Present	PASS
NSA-10	content	Subject includes shop name	Present	PASS

TC-ID	Type	Test Case	Expected	Result
NSA-11	content	HTML detail row shows owner name	Present	PASS
NSA-12	content	HTML detail row shows signup email	Present	PASS
NSA-13	content	HTML detail row shows shop name	Present	PASS
NSA-14	content	HTML detail row shows signup timestamp	Present	PASS
NSA-15	content	HTML includes “VIEW SUPABASE DASHBOARD” CTA	Present	PASS
NSA-16	content	HTML rendered in standard emailShell wrapper	Confirmed	PASS
NSA-17	content	Plain text includes all 4 data fields	All 4 present	PASS
NSA-18	live	Email delivered via Resend API	Resend ID: 058ce440	PASS

Subject line format: New signup: Daniel Osei — Crown Cuts Barbershop

TC-EDGE — Edge Cases & Security

TC-ID	Type	Test Case	Expected	Result
EDGE-01	edge	Booking confirmation renders with all optional fields null (shopAddress, shopPhone, depositAmount, bookingPageUrl)	Renders without error	PASS
EDGE-02	edge	Booking reminder renders with all optional fields null	Renders without error	PASS
EDGE-03	edge	Booking cancellation renders without bookingPageUrl (no CTA)	Renders without error, no CTA shown	PASS
EDGE-04	edge	Low stock subject uses singular “item” when exactly 1 item in list	Subject reads “1 item”	PASS
EDGE-05	edge	Staff invitation with ownerName: null — no literal “null” string in HTML output	No “null” text found	PASS
EDGE-06	security	clientName containing <code><script>alert(1)</script></code> — raw tag must not appear in HTML	Escaped to <code>&lt;script&gt;</code>	PASS

TC-ID	Type	Test Case	Expected	Result
EDGE-07	security	clientName containing O'Brien & Sons — apostrophe and ampersand must be HTML-encoded	Correctly escaped	PASS

6. Bug Report

BUG-001 — XSS Injection via User-Supplied Fields in Email Templates

Severity: Medium

Status: Fixed

File: [src/lib/email/templates.ts](#)

Discovered: During TC-EDGE-06 (automated XSS check)

Description:

All 8 email templates interpolated user-supplied string fields directly into HTML template literals without HTML entity encoding. A client who creates a booking with a crafted name (e.g. `<img src=x onerror=fetch('https://attacker.com')>`) could inject arbitrary HTML into the booking confirmation email sent to other users. While most email clients block JavaScript execution, HTML injection can still break email layout and, in some clients, load remote resources.

Affected fields across templates: - clientName — set by external clients on the public booking page - serviceName, staffName, shopName, shopAddress, shopPhone — set by shop owners - ownerName, email — set during signup - item.name, item.category, item.sku — set by shop owners in inventory

Fix applied:

Added an `esc()` helper function and applied it to all user-supplied string interpolations across all 8 templates:

```
function esc(s: string | null | undefined): string {
  if (!s) return ''
  return s
    .replace(/&/g, '&amp;')
    .replace(/</g, '&lt;')
    .replace(/>/g, '&gt;')
    .replace(/"/g, '&quot;')
    .replace(/'/g, '&#39;')
}
```

Verification: TC-EDGE-06 and TC-EDGE-07 both pass after the fix. The `emailShell()` wrapper function and all `detailRow()` calls now escape shopName. All greeting lines escape clientName/ownerName.

7. Live Delivery Evidence

All 8 test emails were delivered to `webxceld@gmail.com` from `noreply@barberboost.app` via Resend. Resend message IDs are permanent audit records in the Resend dashboard.

Email Type	Resend Message ID	Recipient	Result
Booking Confirmation	f837eac6-97ec-45c2-8a6d-5bbbce6e925f	webxceld@gmail.com	Delivered

Email Type	Resend Message ID	Recipient	Result
Booking Reminder	db89d3ba-d52a-48ad-b22b-4bd7d7d0c9f6	webxceld@gmail.com	Delivered
Booking Cancellation	2077c6ee-aaf0-4957-bfb5-82ea9cfe7753	webxceld@gmail.com	Delivered
No-Show Follow-up	5859403b-2260-4e67-8ba8-9fefb0087aaa	webxceld@gmail.com	Delivered
Low Stock Alert	886f032f-0fc6-4b52-b198-8f7ab6494680	webxceld@gmail.com	Delivered
Welcome Email	b0c242b1-ebc9-45d7-aa07-3d0d9ff29186	webxceld@gmail.com	Delivered
Staff Invitation	e185ba44-2731-4441-a4ad-fb6b44343c14	webxceld@gmail.com	Delivered
New Signup Alert	058ce440-991d-448f-ba11-e734d2d97e81	webxceld@gmail.com	Delivered

Verify in Resend dashboard → Emails → search by message ID.

8. Known Issues & Recommendations

8.1 Local Dev Server — Environment Variables Not Set

Severity: Low (development only, does not affect production)

Status: Open

The .env.local file (created by Vercel CLI) contains empty strings for all variables. `src/lib/env.ts` is imported by the root layout and throws in development mode when `RESEND_API_KEY` is missing, causing the Next.js dev server to fail to render any route.

Resolution: Copy real values from .env.example into .env.local for local development. The production Vercel deployment is not affected — env vars are set correctly in the Vercel dashboard.

8.2 No-Show Follow-up — Not Yet Wired

Severity: Info

Status: By design (template complete, trigger pending)

The `noShowFollowup()` template exists and passes all tests, but there is no API route or cron job that triggers it automatically. It requires a mechanism to detect a no-show (e.g. a booking that remained confirmed past its end time without being marked completed).

Recommendation: Add a cron job that queries bookings from the previous day with status confirmed (i.e. never checked in) and triggers the no-show email.

8.3 Stripe Billing Emails Use Inline HTML, Not the Shared Template System

Severity: Info / Tech debt

Status: Functional but inconsistent

The payment failed and payment receipt emails in `src/app/api/stripe/webhook/route.ts` use inline HTML strings rather than the `emailShell()` wrapper and shared template functions. They will not automatically pick up future template-level changes (e.g. branding updates, footer changes).

Recommendation: Move the two Stripe billing emails into templates.ts as paymentFailed() and paymentReceipt() functions using the shared emailShell() wrapper.

8.4 .env.example Contains Live API Keys

Severity: Medium (security hygiene)

Status: Open

The .env.example file committed to the repository contains what appear to be real, live credentials (RESEND_API_KEY, Twilio ACCOUNT_SID, AUTH_TOKEN, CRON_SECRET). Example files should contain placeholder values only.

Recommendation: Replace all real values in .env.example with clearly fake placeholders (e.g. re_YOUR_RESEND_KEY_HERE). Rotate the exposed keys in Resend, Twilio, and any other affected services.

9. Test Asset

The full automated test suite is saved at [scripts/test-emails.mjs](#).

It can be re-run at any time with no dependencies beyond Node.js v22+ and the project's node_modules. It imports the TypeScript templates directly using Node's --experimental-strip-types flag — no build step required.

```
node --experimental-strip-types scripts/test-emails.mjs
```

Exit code 0 = all checks passed. Exit code 1 = one or more checks failed.

10. Sign-off

Item	Status
All 8 email templates structurally valid	✓
All 8 email templates content-correct	✓
All 8 templates have plain-text fallbacks	✓
All 8 emails delivered live via Resend	✓
HTML injection / XSS vulnerability fixed	✓
development branch ahead of main with all fixes	✓
Test script committed and reusable	✓
No-show trigger wired	⌚ Pending
Stripe billing emails migrated to template system	⌚ Pending (optional)
.env.example keys rotated and replaced with placeholders	⚠ Recommended action

Overall verdict: Email system is production-ready on the development branch.
